EXPERIENCE

Harvii

Software Engineer

Dec 2025 - Present

Remote

- Designed and implemented a multi-tenant conversational-commerce platform across WhatsApp, Instagram, and Web.
- Designed a stateful AI execution pipeline with deterministic controls for tenant isolation and reliable commerce workflows.
- Implemented authoritative pricing, cart and order state, delivery validation, quote consistency, checkout, and payment flows.
- Engineered Redis-backed conversation locking, message coalescing, and stale-generation rejection to prevent duplicate or out-of-order responses.
- Built channel adapters and a normalized inbound-message pipeline so downstream agent logic receives consistent events across customer touchpoints.

KPMG Nigeria

Internship

Jun 2025 - Sep 2025

Lagos, Nigeria

- Built and demonstrated a FastAPI RAG helpdesk prototype over **100+ enterprise documents** using Elasticsearch and pgvector for semantic retrieval of internal IT knowledge.
- Designed a hybrid retrieval pipeline combining Elasticsearch keyword search with pgvector semantic search, exposing grounded IT-support responses through FastAPI and evaluating the system with pilot tier-1 support queries.
- Provided tier-1 IT helpdesk support by triaging user requests, diagnosing access and software issues, documenting fixes, and escalating unresolved incidents.

PROJECTS

PulseLog - Fault-Tolerant Distributed Event Broker | Java 21, Raft, gRPC, Virtual Threads

- Implemented a Kafka-shaped broker with Raft-replicated metadata, partitioned append-only logs, high-watermark replication, consumer groups, and idempotent producers.
- Built log compaction, membership changes, leader failover, gRPC clients, and deterministic chaos tests for broker crashes, network partitions, and replica recovery.

Chowdome - Conversational-Commerce Platform | Django, Telegram, WhatsApp, LangChain, Kora

- Built a production ordering platform used by **50+ merchants at Covenant University**, handling **25,000+ monthly orders**.
- Integrated Telegram, WhatsApp, LangChain, and Kora payments into a backend flow spanning intent, catalog, order, and payment state.
- Implemented ordered message processing and concurrency controls to preserve order state across concurrent customer interactions.

TradePartna - Trading Journal & Copy-Trading Platform | Python, TypeScript, FastAPI, PostgreSQL, Redis, MT5, MetaApi | [Tradepartna.com](https://tradepartna.com)

- Built a trading platform that ingests MT5 history, maintains synchronized journals, and exposes account-level performance analytics through a multi-service backend.
- Engineered Telegram-to-MT5 copy trading with Redis Streams, route-level risk controls, idempotent trade intents, and reconciliation for uncertain broker execution.

EDUCATION

B.Sc. Computer Science (First Class Honours), Covenant University

2022 - 2026

TECHNICAL SKILLS

Languages & Backend: Java, C++, Python, TypeScript, SQL, Spring Boot, FastAPI, Django, gRPC, concurrency, storage
Data, Infrastructure & AI: PostgreSQL, Redis, Qdrant, Elasticsearch, Docker, Linux, AWS, Prometheus, Grafana, PyTorch, ASR, LangChain, RAG, vector search
